Felipe Cordero

Montréal, Canada | 438 459 0482 | mail@felipecordero.com | linkedin.com/in/felipe-cordero | github.com/felipecordero

Summary of Qualifications

- Hands-on Product Engineer (full-stack): owns features end-to-end (product decisions, build, ship, and iterate from feedback) at an AI company where leading tech means shipping personally, not managing from the sidelines.
- Strong **TypeScript** / React / Next.js product craft, plus Python backends and Generative AI / **LLM agents** in production; ships polished UX with a high bar for detail.
- Owns the customer loop: discovery conversations, product demos, post-event follow-ups, and turning client needs into what gets built, plus public community work (industry events, workshops).
- Tracks usage, quality, and performance after launch; clarifies scope, removes blockers, and negotiates trade-offs so releases stay realistic.
- Earlier career in fast-track engineering delivery and cross-team ownership in Chile; civil/structural background (University of Chile) compressed into judgment under pressure, not domain identity.
- English (C1), French (B2), Spanish (native); distributed teams; autonomy under ambiguity.

Professional Experience

Head of Technology (hands-on Product Engineer), Fireraven – Montréal, Canada — Sept. 2026 – Present

- Lead development of the full product surface while building personally: own features end-to-end (problem → scope → TypeScript/React/Next.js + Python/NestJS APIs → ship → improve).
- Work directly with clients: discover needs, run product demos, follow up after events, and reach new prospects; then translate that understanding into roadmap and shipped software for LLM security, risk, and compliance.
- Represented Fireraven at America Digital 2026; post-event outreach and new-client conversations that feed product priorities.
- Mentor and unblock peers so the team ships; grow people while staying a hands-on engineer who owns outcomes.

Full Stack AI Product Engineer, Fireraven – Montréal, Canada — May 2025 – Sept. 2026

- Owned features end-to-end: problem → scope → TypeScript/React/Next.js + Python/NestJS APIs → ship → improve, for LLM security, risk, and compliance product surfaces.
- Shipped Generative AI / LLM agents and pipelines in production; used defects, latency, and adoption data to prioritize the backlog after releases.
- Led a public AI workshop (Collège LaSalle Montréal + Discord): tools, architecture, and production AI paths (teaching and community, not only internal delivery).

Senior Software Developer (product-facing), ObraLink – Remotely (Chile) — Aug. 2023 – May 2025

- Owned product-facing features end-to-end: turned stakeholder needs into shipped full-stack increments (TypeScript/React, FastAPI, PostgreSQL) with clear acceptance criteria and release alignment.
- Built dashboards and real-time / 3D-linked workflows with attention to usable UX for non-technical users; cut reliance on manual reporting.
- Integrated ML analytics via stable APIs; drove quality with TDD, integration tests, and code review.

Technical Team Lead (fast-track delivery), Tensacon – Santiago, Chile — Mar. 2022 – July 2023

- Owned cross-team delivery on fast-track projects (e.g., CODELCO facilities, Pan American Games venues): critical path, schedule/budget, conflict resolution early, and grew engineers under pressure.
- Standardized workflows and automation to cut rework; translated messy real-world process into repeatable operating procedures.

Structural Engineering Team Lead and **R&D Coordinator**, Sirve Engineering – Santiago, Chile — Mar. 2019 – Mar. 2022

- Shipped internal "product" tooling for engineers: requirements → measurable outcomes → Python tools that cut initial sizing time by 75%; mentored juniors while running a multi-project portfolio.

Structural Engineer, Various Engineering Firms – Santiago, Chile — 2010 – 2018

- Seismic design and code compliance; custom calculation tools and automation; mentored junior engineers.

Education

Collège LaSalle Montréal, AEC: Artificial Intelligence and Machine Learning — Sept 2023 – July 2025

University of Chile, Bachelor's Degree in Civil Engineering — 2004 – 2011

Achievements

Academic Excellence Scholarship, Collège LaSalle Montréal – Sponsored by Air Canada — 2025

Outstanding Student, University of Chile – School of Engineering and Sciences — 2009

Skills & Knowledge

TypeScript & Frontend: TypeScript, React (3+ years), Next.js, component architecture, responsive UI, Jest; high bar for product UX detail.

Product ownership & customer loop: End-to-end feature ownership; user stories and acceptance criteria; client discovery, demos, and follow-ups; backlog prioritization; KPI/usage/quality after launch; public demos and community workshops.

AI & GenAI: LLM agents, RAG, AI compliance patterns, LLM serving (BentoML, vLLM, Ollama), LangChain, HuggingFace; AI coding tools in daily product work.

Python & Backend: Python (12+ years), FastAPI, NestJS, RESTful APIs, async services, pytest, Linux/Unix, shell scripting.

Database & Data: PostgreSQL, MySQL, MongoDB, SQL optimization, schema design, SQLModel/ORM patterns.

DevOps & quality: Docker, Git, CI/CD, GCP, TDD, code review, automated tests.

Delivery background: Fast-track cross-team ownership; mentoring and growing engineers; prior AEC/BIM context (compressed).

Languages: English (IELTS C1), French (TCF B2), Spanish (Native).
